Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-8 and 12-14 are rejected under 35 U.S.C. 102(b) as being anticipated by Murray (US Patent 3,960,147).

Murray discloses pliers capable of adjusting a bone plate having two jaws (18/19) that move relative to one another and at least two spaced apart receptacles (16/17) that are axially extended to be inserted into bone plates. The receptacles have a variable outer diameter, similar to a peg-like shape (see Figs. 3-6, both A and B), and also have a portion that is considered a pressure-exerting element (see drawing below) that creates pressure as the device is used and actuated in squeezing the bone plate.

Further the device if capable of form-fitting to different sized holes, and the receptacles extend both substantially parallel or perpendicular, depending on how the device is viewed.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 9-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Murray '147 in view of Pfefferle et al. (US Patent 6,960,211). Murray disclose the claimed invention except for specifically two types of bone plates. Pfefferle et al. disclose at least two types of bone plates (see Figs. 6A and 6B) wherein each half of the plate could be considered its own plate with a single row of holes.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to construct the device of Murray having at least two types of plates in view of Pfefferle et al. to better cover the fracture area desired and to properly secure the plates (See Col. 2, lines 44-66).

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See PTO-892.
